CEN Public Inquiry

- PT1 and Vocabulary have ended their public inquiry phase
  - They enter in the comments resolution phase starting 12 January
  - This phase is targeted to close no later than 26 April
  - Three meetings per week
- PT2
  - Has resumed its activities on 2 December
  - They will publish a supporting TR "Cybersecurity requirements for products with digital elements – Threats and Security Objectives" very soon
  - It's the only horizontal that will be delivered in 2027
  - Drafting will continue for two months
  - Comments resolution will last another two months
  - Public Inquiry phase is planned for 3 months in May-July 2026
- PT3
  - CEN sent PT3 (40000-1-3) to the NSBs to initiate the ENQ phase last week
    - It takes a few days to have that available on their website
    - On NBN website already available (ENQ will run until 9 Feb)
    - DIN plans to have the ENQ phase between 9 Jan and 9 March
  - Still not clear if it will get the presumption of conformity
  - Expected to be published in October 2026

	Oct-25	Nov-25	Dec-25	Jan-26	Feb-26	Mar-26	Apr-26	May-26	Jun-26	Jul-26

PT3 40000-1-3										

Extract from OpenSSF feedback for PT1 and vocabulary

Item number	Type of comment (editorial, technical, remark)	Comments	Proposed change
5.4.2 Guidance	technical	We would like to expand this phrase "This is done by minimizing the attack surface of a product, ensuring that secure configurations are the default, and informing the users about the default secure state."	This is done by implementing tactics like: eliminating the default passwords implementing Multi-Factor Authentication use Single Sign-On mechanisms based on open standards providing secure logging without further additional configuration Creating Software Authorization Profiles and their designated use cases Tracking and reducing 'hardening guide' size Prioritizing the security over backwards compatibility. Source "https://www.cisa.gov/sites/default/files/2023-10/SecureByDesign_1025_508c.pdf"
5.5.2 Guidance	technical	In the list started after "Transparency includes amongst others, methods of relaying information related to:"	we would like to add another topic in that list "- third-party software components used"
6.1 General	editorial	update "reviewing management of the risks according"	include monitoring also in this. The last bullet should be "monitoring and reviewing management of the risks according to 6.7" that will provide also an alignment with the figure from below
6.1 General	technical	update figure 1 and the phases of risk assessment	we would like to add also add risk identification in the risk assessment phase
6.2.1.2 Product intended purpose and reasonable foreseeable use	editorial	some gramatical errors and unclarity in the "Intended purpose: to controls physical access to residential and office premises via a smartphone application and digital key management. Reasonably foreseeable use:"	replace with: "Its intended purpose is to control physical access to residential and office premises via a smartphone application and digital key management. Its Reasonably foreseeable use can be described through the next actions:"
6.2.1.6 Product user description	editorial	The phrase "The product's end user, also referred to in this document as user, is any natural or legal person intended to install/operate/handle/use." is missing a pronoun or a noun	add 'the product' or 'it' at the end of the phrase
6.2.1.6 Product user description	technical	referring to the "install/operate/handle/use" phases from this chapter	add update/upgrade?
6.2.2 Input	editorial	why 'existing' in "existing product architecture"? we would propose to remove it	remove the term 'existing'
6.2.3 Requirement	technical	regarding the phrase "It is recommended to align with the terminology used in the blue guide to describe the product user."	We would remove that line from this section and detail it in 6.2.1.6.
6.3.1 General	technical	regarding the phrase "whether appropriate risk treatment has been applied, and whether the residual risk is acceptable or further mitigation is required." How can this be true in the step number 2 of this process? should not be the risk identified prior to establishing such things?	please justify that step in this phase

Annex B
(informative)

Example of a Cybersecurity Supplier Agreement (CSSA)

B.1 General

Products with digital elements often integrate third-party components and services — including commercial, free, or open-source components — which can introduce cybersecurity risks due to limited control over their lifecycle, design, and support. Managing these risks requires clear responsibilities and structured collaboration between manufacturers and third-party providers.

This annex provides an example of a Cybersecurity Supplier Agreement (CSSA) between the manufacturer and third-party providers (suppliers) of components or services, mainly applicable in a business-to-business context.

To ensure proper cybersecurity and clear responsibilities along the whole supply chain, each entity can initiate a CSSA with its suppliers, as shown in Figure B.1.

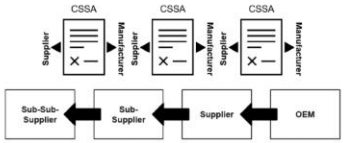

Figure B.1 — Example of CSSAs in the supply chain

A CSSA can support compliance with the requirements of 7.11 by enabling both parties to align on distributed cybersecurity activities and responsibilities during the selection, integration, risk assessment, and maintenance of third-party components, thereby supporting a due diligence approach.

A CSSA can help ensure that risks are addressed at the appropriate location in the supply chain via a shared risk model. This is because some risks are easier to address either upstream or downstream in the supply chain.

The CSSA example is intended to:

— clarify responsibilities in managing cybersecurity activities associated with third-party components;

— align on key assumptions and their validation;

— support alignment on integration instructions, vulnerability handling, and incident response;

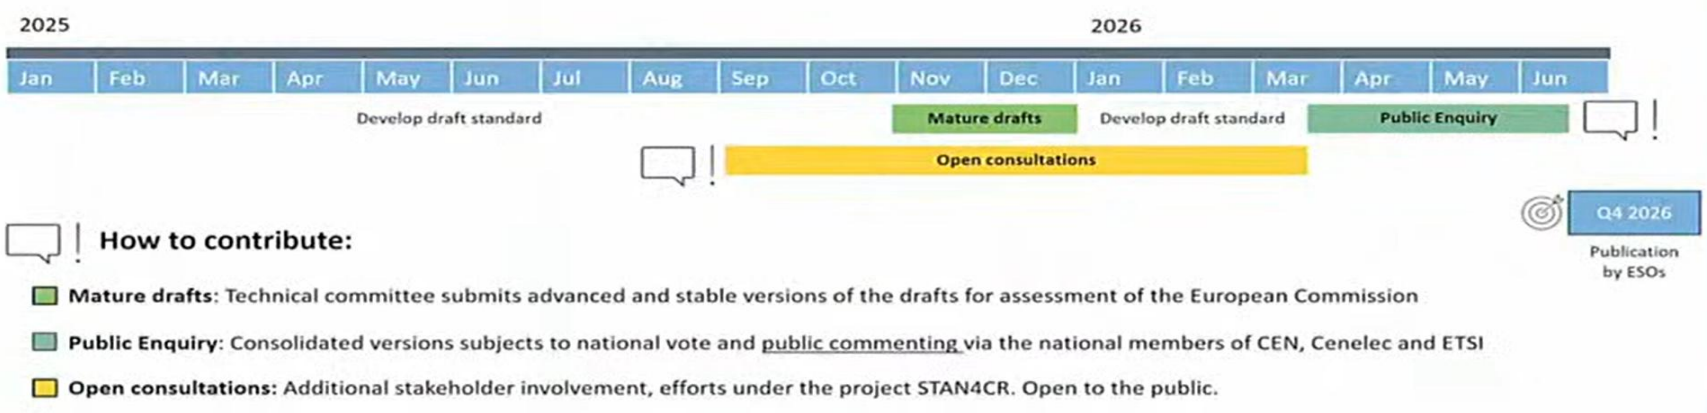
— define required documentation, risk management, lifecycle monitoring expectations, and support periods;

— serve as a basis for auditability and verification of cybersecurity due diligence.

Depending on the product context, the CSSA may include further details such as point of contact, responsibilities at each stage, information exchange formats, methods or tools for collaboration, and

ETSI Open/Public Consultation

- Previewed by a webinar on 29 September
- First phase has ended on 30 November
  - After this phase, ETSI reviewed and assessed the feedback received and implemented all the necessary updates.
- A second phase ended on 31 December
  - They will repeat the same things as for the previous month
- A third one started in January
- Instructions for submitting feedback can be found in the readme.md files available with every standard.
  There are two official submission options:
  - Directly in the .md file or related to the .pdf files from the labs.etsi.org repositories.
  - Via an Excel template available on docbox.etsi.org.
- My strong suggestion is to submit your feedback using one of the two official ETSI options listed above.
- If you submitted feedback, please check the newest drafts to see if your comments have been taken into account
- Some of the vertical standards have been sent for HAS assessment



ETSI upcoming deep-dive sessions

These sessions will focus on the following topics:

- PKI and Digital Certificate Issuance Software
  - On January 14, between 2 and 3:30 PM CET
  - Registration link: https://portal.etsi.org/Meetings.aspx#/meeting?MtgId=84012
  - To connect: https://meet.goto.com/etsicybereusr/deep-dive-sessions
- VPNs
  - On January 14, between 3:30 PM and 5 PM CET
  - Registration link: https://portal.etsi.org/Meetings.aspx#/meeting?MtgId=84013
  - To connect: https://meet.goto.com/etsicybereusr/deep-dive-sessions
- Password Managers
  - On January 15, between 2 and 3:30 PM CET
  - Registration link: https://portal.etsi.org/Meetings.aspx#/meeting?MtgId=84014
  - To connect: https://meet.goto.com/etsicybereusr/deep-dive-sessions
- Boot Managers
  - On January 15, between 3:30 PM and 5 PM CET
  - Registration link: https://portal.etsi.org/Meetings.aspx#/meeting?MtgId=84015
  - To connect: https://meet.goto.com/etsicybereusr/deep-dive-sessions
- Network Management Systems
  - On January 21, between 2 and 3:30 PM CET
  - Registration link: https://portal.etsi.org/Meetings.aspx#/meeting?MtgId=84016
  - To connect: https://meet.goto.com/etsicybereusr/deep-dive-sessions
- Physical and Virtual Network Interfaces
  - On January 21, between 3:30 PM and 5 PM CET
  - Registration link: https://portal.etsi.org/Meetings.aspx#/meeting?MtgId=84017
  - To connect: https://meet.goto.com/etsicybereusr/deep-dive-sessions
- Browsers
  - On January 22, between 3:30 PM and 5 PM CET
  - Registration link: https://portal.etsi.org/Meetings.aspx#/meeting?MtgId=84018
  - To connect: https://meet.goto.com/etsicybereusr/deep-dive-sessions
- Operating Systems
  - On January 23, between 10 AM and 11:30 AM CET
  - Registration link: https://portal.etsi.org/Meetings.aspx#/meeting?MtgId=84019
  - To connect: https://meet.goto.com/etsicybereusr/deep-dive-sessions
- SIEM Systems
  - On January 23, between 11:30 AM and 1 PM CET
  - Registration link: https://portal.etsi.org/Meetings.aspx#/meeting?MtgId=84020
  - To connect: https://meet.goto.com/etsicybereusr/deep-dive-sessions
- Consumer IoT
  - On February 6, between 2PM and 5PM CET
  - Registration link: https://portal.etsi.org/Meetings.aspx#/meeting?MtgId=84021
  - To connect: https://meet.goto.com/etsicybereusr/deep-dive-sessions

CRAzy About Product Cybersecurity

- Held on 3rd December between 10:00 and 12:00 CET
- Hosted by EC (CRA team)
- What was presented:
  - The CRA explained: objectives, scope, and practical implications
  - Cooperation across institutions, industry and Member States: who does what
  - Turning CRA into reality: key phases of the implementation phase, guidance, and ongoing regulatory efforts
  - Making the CRA fit for SMEs: actions to support compliance of smaller businesses
  - From compliance to innovation: state of the play of the standardisation work supporting the CRA
- Further details, including the link to join the session, are available here: CRAzy About Product Cybersecurity: From Compliance to Confidence
- Recording available here

CEN-CENELEC webinars on Hardware devices with security boxes

- CRA Standards Unlocked: Cybersecurity Requirements for Hardware Devices with Security Boxes
  - Online — 08 January 2026 | 11:00–12:30 CET
  - Kick off the year with an essential look at the harmonized standard for Hardware Devices with Security Boxes. Join experts from CEN TC 224 WG 17 as they explain the latest developments and how this work will help you meet the CRA's cybersecurity requirements in a pragmatic, standards-aligned way.
  - Register now for this session and get ahead in your CRA planning!

- CRA Standards Unlocked: Deep Dive Session on Cybersecurity Requirements for Hardware Devices with Security Boxes
  - Online — 22 January 2026 | 13:00–17:00 CET
  - Take a deeper dive into the draft standard with the project's rapporteur and technical experts. This extended session offers hands-on insights into the design approach, compliance criteria shaping, and discussion opportunities that go beyond the high-level overview.
  - Secure your seat — this interactive session is perfect for technical leads, product security teams, SMEs and standards stakeholders.

11 June 2026	Entry into application of the provisions on the notification of Conformity Assessment Bodies. Member States to designate notifying authorities
Q3 2026	First standardisation deliverables (horizontal and product-specific standards)
11 September 2026	Entry into application of reporting obligations
11 December 2026	Notification of sufficient Conformity Assessment Bodies across Member States
30 October 2027	More standardisation deliverables
11 December 2027	Full application of the Cyber Resilience Act

CRA EG Guidelines

Article 26

Guidance

1. In order to facilitate implementation and ensure the consistency of such implementation, the Commission shall publish guidance to assist economic operators in applying this Regulation, with a particular focus on facilitating compliance by microenterprises and small and medium-sized enterprises.

2. Where it intends to provide guidance as referred to in paragraph 1, the Commission shall address at least the following aspects:

(a) the scope of this Regulation, with a particular focus on remote data processing solutions and free and open-source software;

(b) the application of support periods in relation to particular categories of products with digital elements;

(c) guidance targeted at manufacturers subject to this Regulation that are also subject to Union harmonisation legislation other than this Regulation or to other related Union legal acts;

(d) the concept of substantial modification.

The Commission shall also maintain an easy-to-access list of the delegated and implementing acts adopted pursuant to this Regulation.

3. When preparing the guidance pursuant to this Article, the Commission shall consult relevant stakeholders.

FAQ

Scope of the regulation

- When is a product in the scope of the CRA?
- What is a PDE?
- What does it mean to place a product on the market?
- Is source code a PDE?
- Does CRA applies to products placed on the market before CRA?
- Are products that are used only internally, in scope of the CRA?

FAQs on the Cyber Resilience Act

The Cyber Resilience Act (Regulation (EU) 2024/2847) lays down rules for the making available on the market of products with digital elements to ensure their cybersecurity, essential cybersecurity requirements for the design, development and production as well as vulnerability handling processes, obligations for economic operators in relation to those products, and rules on market surveillance and enforcement.

This preliminary set of technical Frequently Asked Questions (FAQs), published approximately two years before the entry into application of the Cyber Resilience Act (CRA), is designed to assist stakeholders in the implementation of the CRA. The FAQs are not meant to cover exhaustively the scope of the CRA, but rather aim to address recurring questions that the Commission services have collected since the entry into force of the CRA. This is intended to be a 'living document' that will be updated as and when necessary.

This document is prepared by the Commission services and should not be considered as representative of the European Commission's official position. The replies to the FAQs do not extend in any way the rights and obligations deriving from applicable legislation nor introduce any additional requirement. The expressed views are not authoritative and cannot prejudge any future actions the European Commission may take, including potential positions before the Court of Justice of the European Union, which is competent to authoritatively interpret Union law.

The Commission is also working on guidance pursuant to Article 26 of the CRA, to be adopted in the coming months.

FAQ Version	Date	Changes
1.0	03/12/2025	New

https://digital-strategy.ec.europa.eu/en/factpages/cyber-resilience-act-implementation
https://ec.europa.eu/newsroom/dae/redirection/document/122331

Conformity assessment

Certification type	Product categories: 1 Default (90% of products)	2 Important Class I	3 Important Class II	4 Critical
EU Declaration of Conformity (self-assessment)	Printers, Bluetooth speakers, games, mobile apps			
Conformity assessment based on internal control following harmonized standards (self-assessment)		Routers, switches, access controls, browsers, VPN, ASIC FPGA, password managers, wearables		
Needs Third-party assessment			Hyper visors, firewalls, tamper-resistant micro-processors, and micro-controllers	
Compliance to certification ENISA schemes, such as the EUCC, at a minimum 'substantial' level				Hardware devices with security boxes, smart meter gateways, smart cards or similiar devices, including secure elements

In accordance with Article 32(5), manufacturers retain the possibility to use module A even in the case of an important product with digital elements of class I or II if their product qualifies as free and open-source software and the technical documentation is made available to the public.

Module A

- Set out in part I of Annex VIII
- A conformity assessment procedure in which the manufacturer verifies that the product with digital elements complies with the essential requirements of the CRA and declares compliance on its sole responsibility.

Module B+C

- set out in Parts II and III of Annex VIII
- A conformity assessment procedure in which the manufacturer verifies that the product with digital elements complies with the essential requirements of the CRA, a notified body examines the design and development of the product, and the manufacturer declares compliance.

Module H

- set out in Part IV of Annex VIII
- A conformity assessment procedure in which the manufacturer implements a full quality control system that ensures that the products subject to this system comply with the essential requirements of the CRA in both the design and the production phases.
- A notified body assesses the overall performance of the quality control system, including periodical tests and checks.

Implementing regulation (EU) 2025/2392

Technical description of the categories of important and critical products with digital elements – link

IMPORTANT PRODUCTS WITH DIGITAL ELEMENTS – Class II
Hypervisors and container runtime systems that support virtualized execution of operating systems and similar environments
Firewalls, intrusion detection and prevention systems
Tamper-resistant microprocessors
Tamper-resistant microcontrollers

CRITICAL PRODUCTS WITH DIGITAL ELEMENTS
Hardware Devices with Security Boxes
Smart meter gateways within smart metering systems as defined in Article 2(23) of Directive (EU) 2019/944 of the European Parliament and of the Council (1) and other devices for advanced security purposes, including for secure cryptoprocessing
Smartcards or similar devices, including secure elements

IMPORTANT PRODUCTS WITH DIGITAL ELEMENTS – Class I
Identity management systems and privileged access management software and hardware, including authentication and access control readers, including biometric readers
Standalone and embedded browsers
Password managers
Software that searches for, removes, or quarantines malicious software
Products with digital elements with the function of virtual private network (VPN)
Network management systems
Security information and event management (SIEM) systems
Boot managers
Public key infrastructure and digital certificate issuance software
Physical and virtual network interfaces
Operating systems
Routers, modems intended for the connection to the internet, and switches
Microprocessors with security-related functionalities
Microcontrollers with security-related functionalities
Application specific integrated circuits (ASIC) and field-programmable gate arrays (FPGA) with security-related functionalities
Smart home general purpose virtual assistants
Smart home products with security functionalities, including smart door locks, security cameras, baby monitoring systems and alarm systems
Internet connected toys covered by Directive 2009/48/EC of the European Parliament and of the Council (1) that have social interactive features (e.g. speaking or filming) or that have location tracking features
Personal wearable products to be worn or placed on a human body that have a health monitoring (such as tracking) purpose and to which Regulation (EU) 2017/745 (2) or (EU) 2017/746 of the European Parliament and of the Council (3) do not apply, or personal wearable products that are intended for the use by and for children

Delegated act on terms and conditions for CSIRTs

- Specifies the terms and conditions for applying the cybersecurity-related grounds in relation to delaying the dissemination of notifications
- Such a decision to delay may be taken in three circumstances:
  - in the light of an evaluation of the nature of the notified information;
  - if the CSIRT receiving the notification is unable to ensure the confidentiality of such information;
  - if the single reporting platform has been compromised or is temporarily not operational.

Have your say

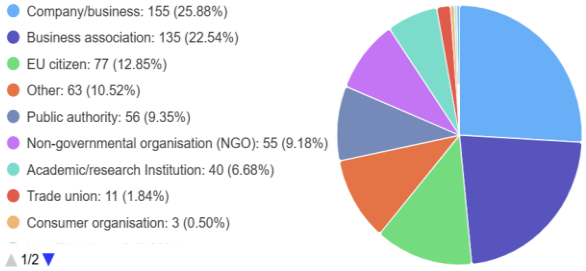
Public consultation to gather your views on revising the EU Standardisation Regulation

- EU launched a public consultation to gather your views on revising the EU Standardisation Regulation.
- This is your opportunity to contribute to a strategic, future-proof approach to standardisation in Europe
- We worked on a submission at the level of LF
  - LFEU was the submitter
  - Supporting papers from OpenSSF, SPDX, JDFP

Total of valid feedback instances received: 599

The number feedback instances shown includes only the valid ones, respecting the feedback rules. The data is regularly updated.

By category of respondent



Public Consultation on European Open Digital Ecosystem Strategy

- https://ec.europa.eu/info/law/better-regulation/have-your-say/initiatives/16213-European-Open-Digital-Ecosystems_en
- The European Open Digital Ecosystem Strategy will set out:
  - a strategic approach to the open source sector in the EU that addresses the importance of open source as a crucial contribution to EU technological sovereignty, security and competitiveness
  - a strategic and operational framework to strengthen the use, development and reuse of open digital assets within the Commission, building on the results achieved under the 2020-2023 Commission Open Source Software Strategy.

RED DA Repeal

- https://ec.europa.eu/info/law/better-regulation/have-your-say/initiatives/14766-Cybersecurity-repeal-of-Delegated-Regulation-supplementing-the-Radio-Equipment-Directive_en
- Deadline tomorrow, 7 January
- This initiative aims to repeal Delegated Regulation 2022/30 on cybersecurity once the Cyber Resilience Act becomes fully applicable on 11 December 2027.
- This will avoid any overlaps between the essential requirements of the Radio Equipment Directive that relate to cybersecurity and those of the Cyber Resilience Act. It will also ensure legal certainty.

ENISA’s calls for feedback

- OpenSSF has submitted a very general feedback for their **Survey on SBOM State of the Art**
- **Advancing Software Supply Chain Security together**
  - draft report
  - You may provide your feedback by **23 January 2026 at 23:59 CET** by taking part in the survey
- **ENISA Technical Advisory for Secure Use of Package Managers**
  - draft document
  - You may take part in the consultation for the Technical Advisory **by 23 January 2026, 23:59 CET** through the following link

ECCC publishes new call for proposals under Digital Europe Programme

- https://cybersecurity-centre.europa.eu/news/eccc-publishes-new-call-proposals-under-digital-europe-programme-2025-10-22_en
- The call Cyber 09 focuses on critical areas of cybersecurity deployment and covers the following topics:
  - Cybersecure tools, technologies and services relying on AI
  - Uptake of innovative cybersecurity solutions for SMEs
  - Coordinated preparedness testing and other preparedness actions
  - Regional Cable Hubs

Revised NIST SSDP

- V1.2
- https://csrc.nist.gov/pubs/sp/800/218/r1/ipd
- *"Future work may expand on this publication and potentially cover topics such as how the SSDF may apply to and vary for particular software development methodologies and associated practices like DevOps, how an organization can transition from their current software development practices to also incorporating the SSDF practices, and **how the SSDF could be applied in the context of open-source software**. Future work will likely take the form of use cases so that the insights will be more readily applicable to specific types of development environments, and it will likely include collaboration with the open-source community and other groups and organizations."*

• WI number – JT013089
• CRA requirement Annex I, Part I, 1
• M/606 item 1, 30/08/2026
• Does not (directly) provide a presumption of conformity.
• Addressing the process activities for security risk management during the total product life cycle.
• Activities are described as:
  • Expected inputs
  • Requirement
  • Expected outputs
  • Assessment criteria
• As a horizontal framework standard, it will not mandate any specific methodologies.
	• **Cybersecurity requirements for products with digital elements – Generic security requirements**
	• WI number : JT013091
	• CRA requirement Annex I, Part I, 2
	• M/606 items 2-14, 30/10/2027
	• Does not provide a presumption of conformity.
	• Addressing the essential product requirements.
	• Provides a library of security controls with their objectives and more technical assessment criteria.
	• Provides a mapping of the essential requirements to these security controls.
	• Builds upon the EN 18031:2024 series, augmented with additional security controls.
		• **Cybersecurity requirements for products with digital elements – Vulnerability handling**
		• WI number : JT013090
		• CRA requirement Annex I, Part II
		• M/606 item 15, 30/08/2026
		• The only horizontal standard of the three that hopefully might be suited for citation to provide a partial presumption of conformity.
		• Addressing the process activities for vulnerability handling.
		• Perceived as a horizontal standard that the verticals should be able to normatively reference with no or minimal adoptions.
		• Strong normative dependency on the SOTA standards EN ISO/IEC 30111 and 29147.

CEN/CENELEC JTC 13 WG9 Work Programme

Project 1

High level process **activities** to address the Total Product Life Cycle, defining:

- Goal that needs to be achieved
- Mandatory and optional inputs
- Minimum expected outcomes

Process activities such as security monitoring, risk assessment, verification, validation and release

Project 3

More detailed process **activities** (with assessment criteria fit for a presumption of conformity) to address the vulnerability management requirements

During risk assessment the appropriate security controls and their appropriate level can be selected to ensure risks are mitigated to an acceptable level

Risk assessment

Product requirements

Project 2

A mapping of the essential product requirements to a list of appropriate **security controls** at various levels

(controls have their own scale/levels to achieve the goal of the security control)

During the elicit requirements activity the deliverables from project 2 can be used to determine and select the appropriate security controls that should be implemented into the product to fulfil on a risk-based manor the essential requirements
