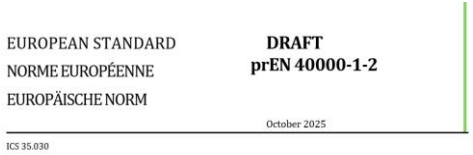
Public inquiry phase for CRA-related standards

CEN PT1 and Vocabulary are under NSB ENQ

- prEN 40000-1-2 = PT1 = Part 1-2: Principles for cyber resilience https://komport.evs.ee/Default.aspx?s=standardCommenting&doc=19694
- prEN 40000-1-1 = Vocabulary https://komport.evs.ee/Default.aspx?s=standardCommenting&doc=19689
- They are also available:
  - on NBN site (National Belgium Standardization Body):
    - PT1
    - Vocabulary
  - on BSI website (UK National Standardization Body):
    - Vocabulary
    - PT1
  - And other NSB sites
  - Please note that both the BSI and NBN platforms require an account even to view the documents.
- CEN deadline to submit comments – 1st January 2026
  - National Standardization Bodies may have different deadlines
    - NBN – Dec 8
    - NEN – Dec 1
    - DIN – Dec 24
    - UK BSI – Dec 2
    - NSAI – Dec 4



EUROPEAN STANDARD
NORME EUROPÉENNE
EUROPÄISCHE NORM

DRAFT
prEN 40000-1-2

October 2025

ICS 35.030

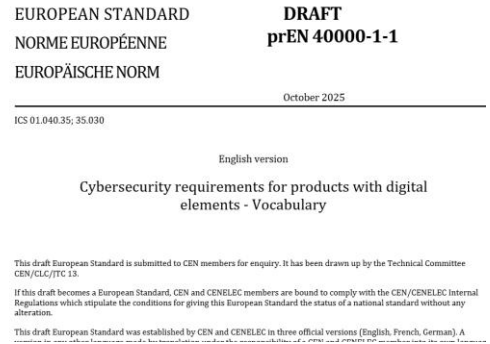
English version

Cybersecurity requirements for products with digital elements - Part 1-2: Principles for cyber resilience

Anforderungen an die Cybersicherheit von Produkten mit digitalen Bestandteilen - Grundsätze für die Cyberesilienz

This draft European Standard is submitted to CEN members for enquiry. It has been drawn up by the Technical Committee CEN/CLC/JTC 13.

If this draft becomes a European Standard, CEN and CENELEC members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration.



EUROPEAN STANDARD
NORME EUROPÉENNE
EUROPÄISCHE NORM

DRAFT
prEN 40000-1-1

October 2025

ICS 01.040.35; 35.030

English version

Cybersecurity requirements for products with digital elements - Vocabulary

This draft European Standard is submitted to CEN members for enquiry. It has been drawn up by the Technical Committee CEN/CLC/JTC 13.

If this draft becomes a European Standard, CEN and CENELEC members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration.

This draft European Standard was established by CEN and CENELEC in three official versions (English, French, German). A

CEN PT2 & PT3

- PT2
  - It will resume on 2 December
  - It's the only horizontal one that will be delivered in 2027
  - Drafting will continue for two months
  - Comments resolution will last another two months
  - Public Inquiry phase is planned for 3 months in May-July 2026
- PT3
  - Delayed
  - Public inquiry planned to start on 2 December (depending on CEN/CENELEC review)
    - Deadline 1 March 2026
  - Still not clear if it will get the presumption of conformity
  - Expected to be published in October 2026
- a table for comments for all horizontal standards is also available

	Oct-25	Nov-25	Dec-25	Jan-26	Feb-26	Mar-26	Apr-26	May-26	Jun-26	Jul-26
Vocabulary 40000-1-1										
PT1 40000-1-2										
PT2 40000-1-4										
PT3 40000-1-3										

Observations

- If CEN does not address the HAS comments, PT3 will not have the presumption of conformity
- PT3
  - SBOMs as complete as possible; it is expected that manufacturers will try to record sub-components of all components
    - In alignment with ISO/IEC 27036-3:2023: An SBoM should list all components in the software, including both direct and indirect (transitive) dependencies. If every dependency is known, the SBoM should explicitly state that no others exist. If some dependencies cannot be identified, it should clearly note that the list is incomplete
    - Maintain SBOM up-to-date
  - Add a section for regular testing and reviews
    - fuzz testing is part of that
  - Secure communications requirements

ETSI Public Consultation

- First phase will close on 30 November
  - After this phase, ETSI will review and assess the feedback received and implement any necessary updates.
  - Following this assessment and implementation phase, a second public consultation will be held.
  - There is no official calendar yet for the second public consultation phase
- Instructions for submitting feedback can be found in the readme.md files available with every standard.

  There are two official submission options:
  - Directly in the .md file or related to the .pdf files from the labs.etsi.org repositories.
  - Via an Excel template available on docbox.etsi.org.
- Important detail: I heard during the WG CYBER EUSR meetings that a deep-dive session will be held to resolve the public comments, and *only those who officially submit comments/feedback will be invited.*
- Therefore, my strong suggestion is to submit your feedback using one of the two official ETSI options listed above.
- For our internal WG consultation:
  - We have also put the available .md files into a shared Google Drive for your convenience to enable a preliminary discussion at our WG level: https://drive.google.com/drive/folders/1kg-U9KmgdjQjtC8OigdwJpwGBlBx_lHv?usp=sharing
  - We remain fully available to discuss any doubts, topics, or unclarities you may have related to these standards.
  - We will reserve time during the Standardization SIG meetings and can schedule additional meetings as needed.
- All the standards have been updated in our repository
  - You will find there the pdfs, the instructions for submitting the comments and also the Gdocs (trying to get closer to the original .md files)
  - I also added a new Template for comments
- Some of the standards are ready to be sent for HAS assessment

CRA Work Items

CRA	M/606 ID	Venue	Work Item	Standard reference	Standard title

III.I.16	31	ETSI CYBER-EUSR	DEN/CYBER-EUS-0011	EN 304 631	Essential cybersecurity requirements for smart home general purpose virtual assistants
III.I.17	32	ETSI CYBER-EUSR	DEN/CYBER-EUS-0014	EN 304 632	Essential cybersecurity requirements for smart home products with security functionalities, including smart door locks, security cameras, baby monitoring systems and alarm systems
III.I.18	33	ETSI CYBER-EUSR	DEN/CYBER-EUS-004	EN 304 633	Essential cybersecurity requirements for Internet connected toys covered by Directive 2009/48/EC that have social interactive features (e.g. speaking or filming) or that have location tracking features
III.I.19	34	ETSI CYBER-EUSR	DEN/CYBER-EUS-003	EN 304 634	Essential cybersecurity requirements for personal wearable products to be worn or placed on a human body that have a health monitoring (such as tracking) purpose and to which Regulation (EU) 2017/745 or Regulation (EU) 2017/746 do not apply or personal wearable products that are intended for the use by and for children
III.II.1	35	ETSI CYBER-EUSR	DEN/CYBER-EUS-0016	EN 304 635	Essential cybersecurity requirements for hypervisors and container runtime systems that support virtualised execution of operating systems and similar environments
III.II.2	36a	ETSI CYBER-EUSR	DEN/CYBER-EUS-0020	EN 304 636	Essential cybersecurity requirements for firewalls, intrusion detection and/or prevention systems
III.II.2	36b	CLC/TC 65X WG 3	81649	EN 62443-5	Security Profile for firewalls and intrusion detection and prevention systems (based on IEC 62443)
III.II.3+4	37, 38	CLC/TC 47X WG 2	80924	EN 50766	Cybersecurity requirements for tamper-resistant microprocessors and microcontrollers
IV.1	39	CEN/TC 224 WG 17	002242XX	EN TTTTT	Cybersecurity requirements for Hardware Devices with Security Boxes
IV.2	40	CEN-CLC/JTC 13 WG 6	JT0130XX	EN TTTTT	Cybersecurity requirements for products with digital elements – Smart Meter Gateway
IV.3	41a	CLC/TC 47X WG 3	80922	EN 50764	Cyber Resilience of EUCC certified platforms of Smart Cards and Similar Devices Including Secure Elements
IV.3	41b	CEN/TC 224 WG 17		EN TTTTTT	Smartcards, similar devices and Secure Elements – criteria to achieve conformity with essential requirements of Regulation (EU) 2024/2847.
		ETSI CYBER-EUSR	DEN/CYBER-EUS-0019	EN 304 642	Cybersecurity Requirements for Network Functions of Telecommunications Systems

Events

CfP FOSDEM

- CFP for **FOSDEM CRA In Practice Devroom** is now open!
- Submit here: https://pretalx.fosdem.org/fosdem-2026/cfp
- Instructions: https://lists.fosdem.org/pipermail/fosdem/2025q4/003697.html
- Important Dates:
  - CfP closes: 1st December 2025 (23:59 UTC)
  - Notification of acceptance: mid-December 2025
  - CRA In Practice Devroom at FOSDEM 2026: Saturday, 31st January 2026, Brussels, Belgium
- Let Roman, Madalin, Megan or Philippe know if you have any questions!

- CFP for **Open Source and EU Policy** is now open!
  - More oriented towards the standards and interplay between the laws
- Submit here: https://pretalx.fosdem.org/fosdem-2026/cfp
- Instructions: https://lists.fosdem.org/pipermail/fosdem/2025q4/003697.html
- Important Dates:
  - CfP closes: 1st December 2025 (23:59 UTC)
  - Notification of acceptance: mid-December 2025
  - CRA In Practice Devroom at FOSDEM 2026: Saturday, 31st January 2026, Brussels, Belgium
- Let Madalin know if you have any questions!

CRAzy About Product Cybersecurity

- Wednesday 3rd December between 10:00 and 12:00 CET
- Hosted by EC (CRA team)
- What to expect:
  - The CRA explained: objectives, scope, and practical implications
  - Cooperation across institutions, industry and Member States: who does what
  - Turning CRA into reality: key phases of the implementation phase, guidance, and ongoing regulatory efforts
  - Making the CRA fit for SMEs: actions to support compliance of smaller businesses
  - From compliance to innovation: state of the play of the standardisation work supporting the CRA
- Further details, including the link to join the session, are available here: CRAzy About Product Cybersecurity: From Compliance to Confidence

Questions about CRA

CRA EG Guidelines

FAQ

Scope of the regulation

- When is a product in the scope of the CRA?
- What is a PDE?
- What does it mean to place a product on the market?
- Is source code a PDE?
- Does CRA applies to products placed on the market before CRA?
- Are products that are used only internally, in scope of the CRA?

Interplay with other legislations

- PLD
- RED DA
- AI Act
- GDPR
- Data Act
- Machine Regulation

Important and critical products

Manufacturer's obligations

- Risk-based approach and risk-assessment
- Vulnerability handling requirements
- Essential requirements (Annex I, part II)
- Due diligence requirements
- Support period

Reporting obligations

Substantial modification

Conformity assessment

Transition period

RDPS

Notion of 'at a distance'

'function'

Outsourced solutions

Overlap with NIS2?

Risk Assessment

CRA requirements

intended purpose, reasonably foreseeable use and reasonably foreseeable misuse

Length of time the product is expected to be in use

Open Source

Monetization

Stewards

New flow-chart (manufacturer vs steward)

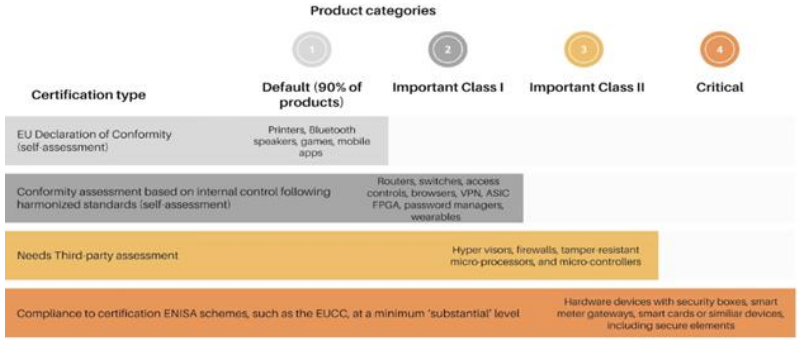
Contributors and downstream uses

Sharing fixes upstream

Examples of scenarios

CRA Q&A

1. How is the general conformity assessment scheme looking?



- Not yet clarified
- How the interplay between the standards is created
- How Module A, B+C and H are adapted?
- How to leverage the results of other conformity assessments paths (e.g. NIS2) in order to reduce the burden?

2. How does art 32 (5) work with partial existing standards. Eg. operating systems / hypervisors?
   TL;DR Manufacturers can apply module A for important classes of products if they are FOSS and if its technical documentation is publicly available

Link for CRA Q&A
https://www.sgs.com/en/news/2025/03/cc-2025-q1-why-the-cyber-resilience-act-matters

CRA Q&A

3. How does art 32 (5) work for free and open source products that rely on non free and open source remote data processing? Does it mandate the remote data processing to be free and open source as well?
   TL;DR: A product with digital elements also includes its remote data processing solutions. EC is currently developing a guideline for RDPS

4. What pilots will be included in the SRP testing?
   TL;DR we do not know precisely yet

5. Does a rolling quarterly release with new features create new products every time and need to be supported on the old version or will the new quarterly release take over the support? Like Long Term Support release vs rolling release.
   TL;DR: “Manufacturers should be able to provide minor security or functionality updates that do not constitute a substantial modification only for the latest version or sub-version of a software product that has not been substantially modified.”

CRA Q&A

6. Is it possible for an organization to be both a manufacturer and a steward for the same product (e.g. for open source software that has a paid support offer, the organization shouldn't be obligated to do manufacturer-specific steps for people who aren't paying for the offered support)?
   TL;DR Not for the same product.

7. If you create open source software to help onboard your system, is that software a product and therefore you are the manufacturer?
   TL;DR No, as most probably that's not a commercial software

AOB

Public consultation to gather your views on revising the EU Standardisation Regulation

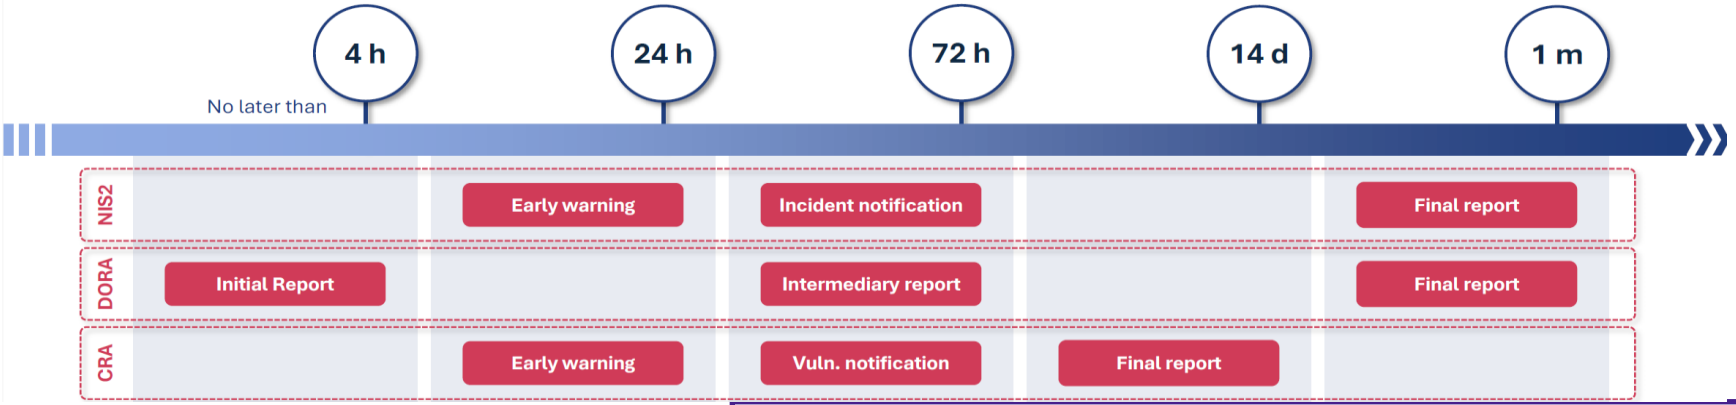
- EU launched a public consultation to gather your views on revising the EU Standardisation Regulation.
- This is your opportunity to contribute to a strategic, future-proof approach to standardisation in Europe
- Are you interested in making the European standardisation system faster, more transparent, and open to all, including startups, SMEs and civil society?
- Contribute by 17 December: https://ec.europa.eu/info/law/better-regulation/info/law/better-regulation/have-your-say/initiatives/14511-Standardisation-Regulation-revision_en

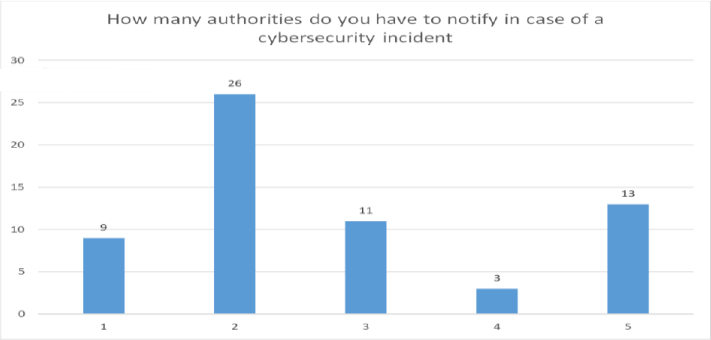
UK Cyber Security and Resilience Bill

- NIS2 for UK
- The Cyber Security and Resilience (Network and Information Systems) Bill proposes new laws to improve UK cyber defences and protect our essential public services
- UK's digital economy is increasingly being attacked by cyber criminals and state actors, affecting essential public services and infrastructure
- The Bill will make crucial updates to the legacy regulatory framework by:
  - expanding the remit of the regulation to protect more digital services and supply chains.
  - putting regulators on a strong footing to ensure essential cyber safety measures are being implemented
  - mandating increased incident reporting to give government better data on cyber attacks
- Summary of research on the economic impact of cyber attacks
  - The cost of significant annual UK cyber attacks - £14.7 billion

Digital Omnibus Regulation proposal

Simplification via the Digital Omnibus?



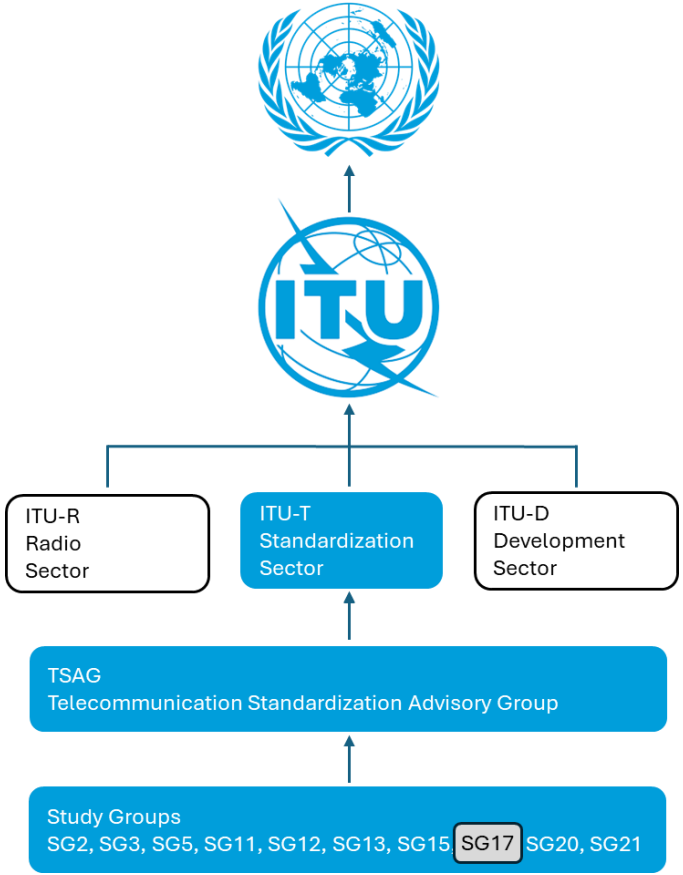


They took into account a part of OpenSSF's requests -> we'll have **"a single-entry point through which entities can simultaneously fulfil their incident reporting obligations under multiple legal acts"**

"The amendments presented in this Regulation will introduce a single-entry point through which entities can simultaneously fulfil their incident reporting obligations under multiple legal acts. Through fostering a "report once, share many" principle, the single-entry point will reduce administrative burden for entities, while ensuring effective and secure flow of information about security incidents to the recipients defined in respective legislation. The proposal establishes the obligation on ENISA to develop the single entry-point, taking into account the single-reporting platform for notifications of actively exploited vulnerabilities and sever incidents under Regulation (EU) 2024/2847 (the Cyber Resilience Act (CRA)). It mandates specific requirements for the tool, as a secure conduit of information reported by entities and dispatched to the competent authorities. It leaves unchanged the underlying legal requirements for incident reporting but optimizes significantly the workflow and the resources required from entities. The proposal also mandates the use of the single-entry point for a series of closely interconnected incident reporting obligations set in the Directive (EU) 2022/2555 (NIS2 Directive), Regulation (EU) 2016/679 (GDPR), Regulation (EU) 2022/2554 (DORA), Regulation (EU) 910/2014 (eIDAS Regulation), and Directive (EU) 2022/2557 (CER Directive)."

ITU-T SG17

- Madalin will represent OpenSSF at the next ITU-T SG17 meeting in Geneva
- In alignment with our intention to increase our partnership database
- We want to establish a partnership with them that could allow us also to contribute wherever our help is needed



Thank you very much

CEN/CENELEC Work Programme

Project Team 1	Project team 2	Project team 3

• **Cybersecurity requirements for products with digital elements – Principles for cyber resilience**
• WI number – JT013089
• CRA requirement Annex I, Part I, 1
• M/606 item 1, 30/08/2026
• Does not (directly) provide a presumption of conformity.
• Addressing the process activities for security risk management during the total product life cycle.
• Activities are described as:
  • Expected inputs
  • Requirement
  • Expected outputs
  • Assessment criteria
• As a horizontal framework standard, it will not mandate any specific methodologies.
	• **Cybersecurity requirements for products with digital elements – Generic security requirements**
	• WI number : JT013091
	• CRA requirement Annex I, Part I, 2
	• M/606 items 2-14, 30/10/2027
	• Does not provide a presumption of conformity.
	• Addressing the essential product requirements.
	• Provides a library of security controls with their objectives and more technical assessment criteria.
	• Provides a mapping of the essential requirements to these security controls.
	• Builds upon the EN 18031:2024 series, augmented with additional security controls.
		• **Cybersecurity requirements for products with digital elements – Vulnerability handling**
		• WI number : JT013090
		• CRA requirement Annex I, Part II
		• M/606 item 15, 30/08/2026
		• The only horizontal standard of the three that hopefully might be suited for citation to provide a partial presumption of conformity.
		• Addressing the process activities for vulnerability handling.
		• Perceived as a horizontal standard that the verticals should be able to normatively reference with no or minimal adoptions.
		• Strong normative dependency on the SOTA standards EN ISO/IEC 30111 and 29147.

CEN/CENELEC JTC 13 WG9 Work Programme

Project 1

High level process **activities** to address the Total Product Life Cycle, defining:

- Goal that needs to be achieved
- Mandatory and optional inputs
- Minimum expected outcomes

Process activities such as security monitoring, risk assessment, verification, validation and release

Project 3

More detailed process **activities** (with assessment criteria fit for a presumption of conformity) to address the vulnerability management requirements

During risk assessment the appropriate security controls and their appropriate level can be selected to ensure risks are mitigated to an acceptable level

Risk assessment

Product requirements

Project 2

A mapping of the essential product requirements to a list of appropriate **security controls** at various levels

(controls have their own scale/levels to achieve the goal of the security control)

During the elicit requirements activity the deliverables from project 2 can be used to determine and select the appropriate security controls that should be implemented into the product to fulfil on a risk-based manor the essential requirements

Key information

- https://portal.etsi.org/home.aspx
- All the works are under the control of TC CYBER WG EUSR https://portal.etsi.org/tb.aspx?tbid=919&SubTB=919#/
- The work programme and the meeting schedule can be found navigating on that page
  - Very intense meeting schedule
  - They have monthly joint meetings with CEN and CENELEC
  - They have weekly general syncs
- Their Forge https://forge.etsi.org/rep/cyber/stan4cr2
  - Only 10 standards (among 18) are developed using markdown
  - The links are also displayed on the WI page
- Links for Public Consultation on ETSI standards
